Doug- Got it. I'll speak to Susan momentarily to close the 135 day query.

Best regards,

Andrew

Suggested:

Yes. EPA has worked closely with CDPHE and local health agencies and water providers to address situations where we have seen PFAS compounds in Colorado. While we identified public water systems in Security, Fountain and Wadsworth areas with PFOA+ PFOS levels exceeding the health advisory level, EPA, CDPHE, and El Paso County worked closely with the Air Force to help affected water systems resolve those concerns quickly following their discovery.

Subject: Re: Question from CO Region 8 PFAS briefing

Does this mean there is no EPA enforcement action taking place in Colorado?

On Feb 14, 2019, at 12:08 PM, Sauerhage, Maggie <Sauerhage.Maggie@epa.gov> wrote:

Hi Erik,

Please see our response below.

EPA uses enforcement tools, when appropriate, to address PFAS exposure in the environment and assist states in enforcement activities.

Background

Site specific conditions determine whether EPA will take an enforcement action related to PFAS-related contamination. The PFOA and PFOS health advisories and the underlying science used in their development are important, but not the only, sources of information EPA uses to make enforcement decisions.

The SDWA grants EPA the authority to take enforcement actions when there is an imminent and substantial endangerment to public health. EPA uses the health advisory level for PFOA/PFOS as the threshold to begin the analysis of whether a known contaminant presents an imminent and substantial endangerment. While a HA is not a legally enforceable standard in the technical meaning of that term, we use it as a threshold to guide our enforcement actions

Thanks,
Maggie

Subject: Question from CO Region 8 PFAS briefing

Hello,

Today's EPA Region 8 briefing ended before my second question was answered. The region 8 page said I could receive an answer here.

Thanks for your time,

-Erik Maulbetsch

Colorado Times Recorder

Question:

In this morning's national briefing, Andrew Wheeler said "We [the EPA] don't have to have an MCL to force the cleanup of drinking water if the level is over 70ppt. We can force the cleanup of drinking water with the water companies."

What such enforcement is taking place today in Colorado? Have any private companies, public water districts or other public or military entities been forced to take action by the EPA? If so, in what way and with what consequences should they fail to comply?
